

**Influenza Vaccine Doses Produced for the U.S. Market
1979-2009**

Year	Doses Produced (in M)	Doses Distributed (in M)	Difference (in M)
2009	114	114	0
2008	135.9	113.0*	22.9**
2007	140.6	112.8*	27.8**
2006	120.9	102.5*	18.4**
2005	91.7	81.5	7.0**
2004	61.0	57.0	4.0**
2003	86.9	83.1	3.8
2002	95.0	83.0	12.0
2001	87.7	77.7	10.0
2000	77.9	70.4	7.5
1999	77.2	76.8	0.5
1998	76.8	62.6	14.2
1997	85.6	75.3	10.3
1996	68.0	58.2	9.8
1995	71.5	54.9	16.6
1994	67.0	52.1	14.9
1993	53.4	47.1	6.3
1992	48.4	38.3	10.1
1991	37.9	28.5	9.4
1990	32.3	28.3	4.0
1989	30.8	26.1	4.7
1988	23.8	19.9	3.9
1987	26.2	22.6	3.6
1986	21.5	19.3	2.2
1985	23.2	20.1	3.1
1984	15.2	14.2	1.0
1983	20.3	17.9	2.4
1982	19.2	17.0	2.2
1981	21.6	19.8	1.8
1980	15.7	12.4	3.3
1979	21.7	19.6	2.1

* Beginning in 2006-2007, CDC began using a new methodology to determine the number of influenza vaccine doses distributed. The new methodology includes data from the seven major influenza vaccine distributors and manufacturers, whereas the former methodology only included data from manufacturers. Due to the fact that the new methodology provides more precise information, it is not surprising that the percent distributed is slightly lower than previous years.

** Beginning in 2004-05, doses produced for the Pediatric Vaccine Strategic Reserve/Stockpile for influenza vaccine are included in the doses produced, but are not included in the doses distributed if they remained in the strategic reserve. Thus doses

purchased for the strategic reserve, but not distributed, are included in the column labeled "Difference." Prior to 2004, CDC did not have a Pediatric Vaccine Strategic Reserve for influenza vaccine.
